

The Mass. and R.I. Professional Guide To IT Support and Services

What You Should Expect To Get and Pay For IT Support For Your Business

(And How To Get *Exactly* What You Need Without
Unnecessary Extras, Hidden Fees And Bloated Contracts)

Read this guide and you'll discover:

- ✓ The three most common ways IT services companies charge for their services, and the pros and cons of each approach.
- ✓ A common billing model that puts ALL THE RISK on you, the customer, when buying IT services; you'll learn what it is and why you need to avoid agreeing to it.
- ✓ Exclusions, hidden fees and other "gotcha" clauses IT companies put in their contracts that you DON'T want to agree to.
- ✓ How to make sure you know exactly what you're getting to avoid disappointment, frustration and added costs later on that you didn't anticipate.
- ✓ 21 revealing questions to ask your IT support firm BEFORE giving them access to your computer network, e-mail and data.

Provided as an educational service by:

Tom Lopolito, President
Parsec Systems Inc
670 Depot St, Easton, MA, United States, 02356

Never ask an IT services company, "What do you charge for your services?" Instead you should ask, "What Will I Get For My Money?"

From The Desk Of: Tom Lopolito
President of Parsec Systems Inc

Dear Colleague,

If you are a CPA, Attorney, Medical Provider or other professional organization in Mass. Or R.I. that is currently looking to outsource some or all of your IT support, this report contains important information that will be extremely valuable to you as you search for a competent firm you can **trust**.

My name is Tom Lopolito, President of Parsec Systems Inc. We've been providing IT services to businesses in the Ma, R.I. area for 20 years now, and our experience in computers and electronics far exceeds that number. You may not have heard of us before, but I'm hopeful you'll recognize what we can do for you based on one or more comments that some of our clients listed below.

One of the most commons questions we get from new perspective clients calling our office is "What do you guys charge for your services?" Since this is such a common question – and a very important one to address – I decided to write this report for three reasons:

1. I wanted an easy way to answer this question and educate all prospective clients who come to us on the most common ways IT services companies' package and price their services, and the pros and cons of each approach.
2. I wanted to bring to light a few "industry secrets" about IT services contracts and SLAs (service level agreements) that few companies think about, understands or know to ask about when evaluating IT services providers. If you're not diligent they can end up burning you with hidden fees and locking you into a long-term contract when they are unwilling or unable to deliver the quality of service you need.
3. I wanted to educate professional organizations on how to pick the **right** IT services company for their specific situation, budget and needs based on the **VALUE** the company can deliver, not just the price, high OR low.

In the end, my purpose is to help you make the most informed decision possible, so you end up working with someone who helps you solve your problems and accomplish what you want in a time frame, manner and budget that is right for you.

About The Author

Parsec Systems has experience with computers and IT going back to the late 1970's. Before Microsoft, Linux, email servers, Office 365 or desktops there was Data General and Digital. Our experience is very broad which benefits our customers. We have experience in hardware, software, integration as well as design. We know IT. We are your on-call IT support team and have built our business through trust & fairness.

Our customers are the lifeblood of our company and are treated as such. We respond quickly to identify issues and provide solutions so that they can feel confident in putting their trust in us. We don't just push technology but sit with them to make sure they understand what the needs are and the best way to solve them for their unique business structure.

Our achievements are identified by our customers. They put their trust in us and refer us to other businesses.

Comparing Apples To Apples: The Predominant IT Service Models Explained

Before you can accurately compare the fees, services, and deliverables of one IT services company with another, you need to understand the three predominant service models most of these companies fit within. Some companies offer a blend of all three, while others are strict about offering only one service plan. The three predominant service models are:

- **Time and Materials.** In the industry, we call this "break-fix" services. Essentially you pay an agreed-upon hourly rate for a technician to "fix" your problem when something "breaks." Under this model, you might be able to negotiate a discount based on buying a block of hours. The scope of work may be simply to resolve a specific problem, like fixing an issue with your e-mail, or it may encompass a large project, like a network upgrade or move that has a specific result and end date clarified. Some companies will offer staff augmentation and placement under this model as well.
- **Managed IT Services.** This is a model where the IT services company takes the role of your fully outsourced "IT department" and not only installs and supports all the devices and PCs that connect to your server(s), but also offers phone and on-site support,

- antivirus, cyber security, backup, and a host of other services to monitor and maintain the health, speed, performance and security of your computer network.
- **Software Vendor-Supplied IT Services.** Many software companies will offer IT support for their customers in the form of a help desk or remote support for an additional fee. However, these are typically scaled-back services, limited to troubleshooting their specific application and NOT your entire computer network and all the applications and devices connected to it. If your problem resides outside of their specific software or the server it's hosted on, they can't help you and will often refer you to "your IT department." While it's often a good idea to buy some basic-level support package with a critical software application you use to run your business, this is not enough to provide the full IT services and support most businesses need to stay up and running.

When looking to outsource your IT support, the two service models you are most likely to end up having to choose between are the "managed IT services" and "break-fix" models. Therefore, let's dive into the pros and cons of these two options, and then the typical fee structure for both.

Managed IT Services Vs. Break-Fix: Which Is The Better, More Cost-Effective Option?

You've probably heard the famous Benjamin Franklin quote, "An ounce of prevention is worth a pound of cure." I couldn't agree more – and that's why it's my sincere belief that some form of managed IT is essential for every professional organization that relies on a solid network and desktop operation for their daily operations.

In our company, we offer different plans to fit the needs of our clients. In some cases, where the business is small, we might offer a very basic managed services plan to ensure the most essential maintenance is done, then bill the client hourly for any support used. For our smallest clients, they often find this the most economical. But for some of our midsize organizations, we offer a fully managed approach where more comprehensive IT services are covered in a managed plan. By doing this, we can properly staff for their accounts and ensure they get the fast, responsive support and expertise they need.

The only time I would recommend a "time and materials" approach is when you already have a competent IT person or team proactively managing your computer network and simply have a specific IT project to complete that your current in-house IT team doesn't have the time nor expertise to implement (such as migrating to a cloud-based solution, implementing a cyber security plan, etc.). Outside of that specific scenario, I do not think the break-fix approach is a good idea for general IT support for one very important, fundamental reason: you'll ultimately end up paying for a pound of "cure" for problems that could have easily been avoided with an "ounce" of prevention.

Why Regular Monitoring and Maintenance Is Critical For Today's Computer Networks

The fact of the matter is computer networks absolutely, positively need ongoing maintenance and monitoring to stay secure. The ever-increasing dependency we have on IT systems and the data they hold – not to mention the *type* of data we're now saving digitally – has given rise to very smart and sophisticated cybercrime organizations that work around the clock to do one thing: hack into your network to steal data or money or to hold you ransom.

As you may know, ransomware is at an all-time high because hackers make millions of tax-free dollars robbing one small business owner at a time. But that's not their only incentive.

Some will attempt to hack your network to gain access to bank accounts, credit cards or passwords to rob you (and your clients). Some use your computer network to send spam using YOUR domain and servers, host pirated software and, of course, spread viruses. Some even do it just for the "fun" of it.

And don't think for a minute these cybercriminals are solo crooks working alone in a hoodie out of their basement. They are highly organized and well-run operations employing *teams* of hackers who work together to scam as many people as they can. They use advanced software that scans millions of networks for vulnerabilities and use readily available data on the dark web of YOUR usernames, passwords, e-mail addresses and other data to gain access.

Of course, this isn't the only IT danger you face. Other common "disasters" include rogue employees, lost devices, hardware failures (still a BIG reason for data loss), fire and natural disasters and a host of other issues that can interrupt or outright destroy your IT infrastructure

and the data it holds. Then there's regulatory compliance for any business hosting or touching credit card or financial information, medical records and even client contact information such as e-mail addresses.

Preventing these problems and keeping your systems up and running (which is what managed IT services is all about) is a LOT less expensive and damaging to your organization than waiting until one of these things happens and then paying for emergency IT services to restore your systems to working order (break-fix).

Should You Just Hire a Full-Time IT Manager?

In most cases, it is not cost-effective for companies with under 75 employees to hire a full-time IT person for a couple of reasons.

First of all, no one IT person can know everything there is to know about IT support and cyber security. If your company is big enough and growing fast enough to support a full-time IT lead, you probably need more than one guy. You need someone with help-desk expertise as well as a network engineer, a network administrator, a CIO (chief information officer) and a CISO (chief information security officer).

Therefore, even if you hire a full-time IT person, you may still need to supplement their position with co-managed IT support using an IT firm that can fill in the gaps and provide services and expertise they don't have. This is not a bad plan; what IS a bad plan is hiring one person and expecting them to know it all and do it all.

Second, finding and hiring good people is difficult; finding and hiring skilled IT people is incredibly difficult due to the skill shortage for IT. And if you're not technical, it's going to be very difficult for you to interview candidates and sift and sort through all the duds out there to find someone with good skills and experience. Because you're not technical, you might not know the right questions to ask during the interview process or the skills they need to do the job.

More often than not, the hard and soft costs of building an internal IT department for general IT support just don't provide the best return on investment for the average small to midsize business. An internal IT department typically doesn't make sense until you have closer to 75 employees OR you have unique circumstances and need specialized skills, a developer, etc., but not for day-to-day IT support and maintenance.

Why "Break-Fix" Works Entirely In The Consultant's Favor, Not Yours

Under a "break-fix" model, there is a fundamental conflict of interests between you and your IT firm. Some IT service company don't have the incentive to prevent problems, stabilize your network or resolve problems quickly because they are getting paid by the hour when things stop

working; therefore, the risk of unforeseen circumstances, scope creep, learning curve inefficiencies and outright incompetence are all shifted to YOU, the customer. Essentially, the more problems you have, the more they profit, which is precisely what you DON'T want.

Under this model, the IT consultant can take the liberty of assigning a junior (lower-paid) technician to work on your problem – one who may take two to three times as long to resolve an issue that a more senior (and more expensive) technician might resolve in a fraction of the time. There is no incentive to properly manage the time of that technician or their efficiency, and there is every reason for them to prolong the project and find MORE problems than solutions. Of course, if they're ethical and want to keep you as a client, they *should* be doing everything possible to resolve your problems quickly and efficiently; however, that's akin to putting a German shepherd in charge of watching over the ham sandwiches. Sometimes it works...other times not so much

Second, it creates a management problem for you, the customer, who now has to keep track of the hours they've worked to make sure you aren't getting overbilled, and since you often have no way of really knowing if they've worked the hours they say they have, it creates a situation where you really, truly need to be able to trust they are being 100% ethical and honest AND tracking THEIR hours properly (not all do).

And finally, it makes budgeting for IT projects and expenses a nightmare since they may be zero one month and thousands the next.

What Should You Expect To Pay?

Important! Please note that the following price quotes are industry averages based on a recent IT industry survey conducted of over 750 different IT services firms. We are providing this information to give you a general idea of what most IT services firms charge and to help you understand the VAST DIFFERENCES in service contracts that you must be aware of before signing on the dotted line. Please understand that this does NOT reflect our pricing model or approach, which is simply to understand exactly what you want to accomplish FIRST and then customize a solution based on your specific needs, budget, and situation.

Hourly Break-Fix Fees: Most IT services companies selling break-fix services charge between 95 and 175 per hour with a two-four hour minimum. In most cases, they will give you a discount of 5% to as much as 20% on their hourly rates if you purchase and pay for a block of hours in advance.

If they are quoting a **project**, the fees range widely based on the scope of work outlined. If you are hiring an IT consulting firm for a project, I suggest you demand the following:

- **A very detailed scope of work that specifies what "success" is.** Make sure you detail what your expectations are in performance, workflow, costs, security, access, etc. The more detailed you can be, the better. Detailing your expectations up front will go a long way toward avoiding miscommunications and additional fees later on to give you what you REALLY wanted.
- **A fixed budget and time frame for completion.** Agreeing to this up front aligns both your agenda and the consultant's. Be very wary of loose estimates that allow the consulting firm to bill you for "unforeseen" circumstances. The bottom line is this: it is your IT consulting firm's responsibility to be able to accurately assess your situation and quote a project based on their experience. You should not have to pick up the tab for a consultant underestimating a job or for their inefficiencies. A true professional knows how to take into consideration those contingencies and bill accordingly. The only exception to this would be information your consultant wasn't aware, such as servers running in a closet you forgot to mention, remote users not on his list, etc. Expect to pay the cost of the hardware up front, and the balance upon completion. Completion being defined by a pre-set criteria defined in the agreement.

Managed IT Services: Most managed IT services firms will quote you a MONTHLY fee based on the number of devices they need to maintain, back up and support. In Ma, R.I., that fee is somewhere in the range of \$135 to \$295 per server, \$75 to \$275 per desktop and approximately \$25 per smartphone or mobile device.

If you hire an IT consultant and sign up for a managed IT services contract, here are some things that **SHOULD** be included (make sure you read your contract to validate this):

- Security patches applied weekly, if not daily, for urgent and emerging threats
- Antivirus updates and monitoring
- Firewall updates and monitoring
- Spam-filter installation and updates
- Monitoring workstations and servers for signs of failure
- Optimizing systems for maximum speed
- Documentation of your network, software licenses, credentials, etc.

The following services may **NOT be included** and will often be billed separately. This is not necessarily a "scam" or unethical UNLESS the managed IT services company tries to hide these fees when selling you a service agreement. Make sure you review your contract carefully to know what is and is NOT included!

- Hardware, such as new servers, PCs, laptops, etc.
- Software licenses
- Special projects
- Compliance testing
- Backups

Warning! Beware the gray areas of "all-inclusive" service contracts. In order to truly compare the "cost" of one managed IT services contract with another, you need to make sure

you fully understand what IS and ISN'T included AND the "SLA" or "service level agreement" you are signing up for. It's VERY easy for one IT services provider to appear far less expensive than another UNTIL you look closely at what you are getting.

The following are 14 questions to ask your IT services provider that will clarify exactly what you're getting for the money. Some of these items may not be that important to you, while others (like response time, adequate insurance and uptime guarantees) may be critical. Make sure you fully understand each of these items before making a decision about who the right provider is for you, then make sure you get this IN WRITING.

14 Questions You Should Ask Your IT Services Company Or Consultant Before Hiring Them For IT Support

Customer Service:

Q1: When I have an IT problem, how do I get support?

Our Answer: When a client has a problem, we "open a ticket" in our IT management system so we can properly assign, track, prioritize, document and resolve client issues. However, some IT firms force you to log in to submit a ticket and won't allow you to call or e-mail them. While a portal is a good option, it should never be your ONLY option for requesting support. Having said that, opening a ticket for most issues is the best way to track it. Calling in an emergency is always the best option.

Also, make sure they HAVE a reliable system in place to keep track of client "tickets" and requests. If they don't, I can practically guarantee your requests will sometimes get overlooked, skipped and forgotten.

Requesting support should also be EASY for you. So be sure to ask how you can submit a problem to their support desk for resolution. We make it easy. Calling, e-mailing, or submitting a ticket via our portal puts your IT issue on the fast track to getting resolved.

Q2: Do you offer after-hours support, and if so, what is the guaranteed response time?

Our Answer: Any good IT company will respond from 8:00 a.m. to 5:00 p.m. every weekday. But many CEOs and executives work outside normal "9 to 5" hours and need IT support both nights and weekends. You can reach us any time and any day. Once we've been given the issue by you we will respond within an hour for normal non critical issues and within minutes for problems marked "emergency," such as a network being down or a critical problem that is significantly impacting your ability to work.

Q3: Do you have a written, guaranteed response time for working on resolving your problems?

Our Answer: Make sure you know what the expected response time is once a ticket has been created. Most IT firms offer a 60-minute time to your call during normal business hours.

IT Maintenance (Managed Services):

Q4: Do you offer true managed IT services and support?

Our Answer: You want to find an IT company that will proactively monitor for problems and perform routine maintenance on your IT systems. If they don't have the ability to do this, or they don't offer it, we strongly recommend you look somewhere else. Our remote network monitoring system watches over your network to constantly look for developing problems, security issues and other problems so we can address them BEFORE they turn into bigger problems.

Q5: What is NOT included in your managed services agreement?

Our Answer: Another "gotcha" many IT companies fail to explain is what is NOT included in your monthly managed services agreement that will trigger an invoice. Their so-called "all you can eat" option is RARELY true – there are limitations to what's included and you want to know what they are BEFORE you sign.

It's very common for projects to not be included, like a server upgrade, moving offices, adding new employees and, of course, the software and hardware you need to purchase.

Other things to inquire about are:

- How does the help desk service work? Is it unlimited (usually more money), or based on a block monthly hourly rate that resets every month?
- Does the service include support for cloud services such as Microsoft 365?
- How do they charge to resolve a problem with a line-of-business application, Internet service provider, phone system, leased printer, etc.? (What you want is an IT company that will own the problems and not point fingers.
- What about on-site support calls? Or support to remote offices?
- If our employees had to work remote (due to a shutdown, natural disaster, etc.), would you provide support on their home PCs or would that trigger a bill?

Q6: Do you offer documentation of our network as part of the plan, and how does that work?

Our Answer: Network documentation is exactly what it sounds like: the practice of maintaining detailed technical records about the assets you own (computers, devices, software, passwords, etc.) and how your network is set up, backed up and secured. Every IT company should provide this to you in both written (paper) and electronic form at no additional cost and update it on a quarterly basis.

Why is this important? There are several reasons:

First, it shows professionalism and integrity in protecting YOU. No IT person or company should be the only holder of the keys to the kingdom. Because we document your network assets and passwords, you have a blueprint you can give to another IT person or company to take over if necessary.

Second, good documentation allows the engineers working on your account to resolve problems faster because they don't waste time fumbling their way around your network trying to find things and uncover accounts, hardware, software licenses, etc. Third, if you had to restore your network after a disaster, you'd have the blueprint to quickly put things back in place as they were.

Finally, and most important, if you ever need to switch IT providers, your replacement company will be able to take over quickly because the network has been documented properly.

All our clients receive this in written and electronic form at no additional cost. We also perform a quarterly update on this material and make sure certain key people from your organization have this information and know how to use it, giving you complete control over your network.

Q7: Do you meet with your clients quarterly as part of your managed services agreement?

Our Answer: To us, there's nothing more important than face-to-face time with our clients. Therefore, we make it a priority to meet with all our clients at least quarterly (more if needed) to provide a "technology review."

In these meetings, we provide you with the status updates of projects you're working on and of the health and security of your network. We also make recommendations for new equipment and upgrades you'll be needing soon or sometime in the near future. Our quarterly meetings with you are C-level discussions (not geek-fests) where we openly discuss your business goals, including your IT budget, critical projects, compliance issues, known problems and cyber security best practices.

Our goal in these meetings is to help you improve operations, lower costs, increase efficiencies and ensure your organizational productivity stays high. This is also your opportunity to give us feedback on how we're doing and discuss upcoming projects.

Q8: If I need or want to cancel my service with you, how does this happen and how do you offboard us?

Our Answer: Make sure you carefully review the cancellation clause in your agreement. Many IT firms hold their clients hostage with hefty cancellation penalties outside of the actual monthly agreement. As we pay for the services we provide all we ask is the contract be paid in full with no added costs of penalties.

Cyber Security:

Q9: What cyber security certifications do you and your in-house team have?

Our Answer: It's important that your IT firm have experience in this area with the ability to offer you employee training. Some business owners won't invest in training and give this excuse: "What if I

spend all this money in training my employees and then they leave us for another job?" Our response is, "What if you DON'T train them and they stay?"

Q10: How do you lock down our employees' PCs and devices to ensure they're not compromising our network?

Our Answer: As above, the question may get a bit technical. The key is that they HAVE an answer and don't hesitate to provide it. Some of the things they should mention are:

- 2FA (two-factor authentication)
- Advanced end-point protection, NOT just antivirus
- Training

Because a combination of these lockdown strategies is essential to protecting your network and data, we advise ALL of these for our clients. Effective cyber security should never compromise between choosing this OR that. It should feature every weapon in your arsenal.

Backups And Disaster Recovery:

Q11: Can you provide a timeline of how long it will take to get my network back up and running in the event of a disaster?

Our Answer: There are two aspects to backing up your data that most business owners aren't aware of. The first is "fail over" and the other is "fail back." For example, if you get a flat tire, you would fail over by putting on the spare tire to get to a service station where you can fail back to a new or repaired tire.

If you were to have a disaster that wiped out your data and network – be it a ransomware attack or natural disaster – you want to make sure you have a fail-over solution in place so your employees could continue to work with as little interruption as possible. This fail-over should be in the cloud and locked down separately to avoid ransomware from infecting the backups as well as the physical servers and workstations.

But, at some point, you need to fail back to your on-premise network, and that's a process that could take days or even weeks. If the backups aren't done correctly, you might not be able to get it back at all.

So, one of the key areas you want to discuss with your next IT consultant or firm is how they handle both data backup AND disaster recovery. They should have a plan in place and be able to explain the process for the emergency fail-over as well as the process for restoring your network and data with a timeline.

In this day and age, regardless of natural disaster, equipment failure or any other issue, your business should ALWAYS be able to be operational with its data within eight hours or less, and critical operations should be failed over immediately.

We understand how important your data is and how getting your team up and running quickly is essential to your business success. Therefore, in the event of any disaster, we can confidently get your network back up and running in 8 hours or less depending on the type of solution you select.

Q12: Do you INSIST on doing periodic test restores of my backups to make sure the data is not corrupt and could be restored in the event of a disaster?

Our Answer: A great IT consultant will place eyes on your backup systems every single day to ensure that backups are actually occurring, and without failures. However, in addition to this, your IT company should perform a quarterly randomized "fire drill" test restore of some of your files from backups to make sure your data CAN be recovered in the event of an emergency. After all, the WORST time to "test" a backup is when you desperately need it.

If you don't feel comfortable asking your current IT company to test your backup OR if you have concerns and want to see proof yourself, just conduct this little test: Copy three unimportant files onto a thumb drive (so you don't lose them) and delete them from your server. Make sure one was newly created that same day, one was created a week earlier and the last a month earlier. Then call your IT company and let them know you've lost three important documents and need them restored from backups as soon as possible. They should be able to do this. If not, you have a problem that needs to be addressed immediately!

Verifying your backups daily and testing them on a regular basis is a cornerstone of a successful overall IT strategy. These are the lengths we go to for all our clients, including multiple random "fire drill" test restores to ensure ALL your files are safe because they are always backed up.

Q13: If I were to experience a location disaster, pandemic shutdown or other disaster that prevented me from being in the office, how would you enable me and my employees to work from a remote location?

Our Answer: If Covid taught us anything, it's that work-interrupting disasters CAN and DO happen when you least expect them. Fires, floods, hurricanes, and tornadoes can wipe out an entire building or location. Covid forced everyone into lockdown, and it could happen again.

We could experience a terrorist attack, civil unrest or riots that could shut down entire cities and streets, making it physically impossible to get into a building. Who knows what could be coming down the pike? Hopefully NONE of this will happen, but sadly it could.

That's why you want to ask your prospective IT consultant how quickly they were able to get their clients working remote (and securely) when Covid shut everything down. Ask to talk to a few of their clients about how the process went.

Q14: Show me your process and documentation for onboarding me as a new client.

Our Answer: The reason for asking this question is to see if they HAVE SOMETHING in place. A plan, a procedure, a process. Don't take their word for it. Ask to SEE it in writing. What's important here is that they can produce some type of process. Further, they should be able to explain how their process works.

One thing you will need to discuss in detail is how they are going to take over from the current IT company – particularly if the current company is hostile. It's disturbing to me how many IT companies or people will become bitter and resentful over being fired and will do things to screw up your security and create problems for the new company as a childish way of getting revenge. (Sadly, it's more common than you think.) A good IT company will have a process in place for handling this.

If you consider us as your next IT services firm, we will gladly share our new client onboarding process and documentation. I think you'll be impressed.

Other Things To Notice And Look For:

Are they good at answering your questions in terms you can understand and not in arrogant, confusing "geek-speak"?

Good IT companies won't confuse you with techno-mumbo-jumbo, and they certainly shouldn't make you feel stupid for asking questions. All great consultants have the "heart of a teacher" and will take time to answer your questions and explain everything in simple terms. As you interact with them in the evaluation process, watch for this.

Do they understand how your business operates the line-of-business applications you depend on? Are they familiar with how you communicate, get paid, service your clients or patients and run your business? We have several professional clients. The reason we work well with them is

because we're good. There is a maxim that says "In real estate its location, location , location." For IT that becomes "experience, experience, experience." We have 40 years of it.

Do they and their technicians present themselves as true professionals when they are in your office? Do they dress professionally and show up on time?

Testimonials

Lastly, we'll toot our own horn here with some testimonials from some of our customers.

"As a small business, we have used several different IT companies throughout the years to help with various IT needs that arise. We were very fortunate to have found Parsec Systems and now they are the only guys we choose. Tom from Parsec has handled our account and he is a super guy. Parsec has helped us install a network server with full protection. When we upgraded our computers, Parsec helped walk us through the options that best served our company and took care of everything involved in the upgrade. We most recently moved and Tom and his staff took time to sit down with us to find out exactly what we need and then wired our new office and set up everything so it was plug and go for our team. Our company feels safe and at ease knowing that our IT needs our 100% met and taken care of immediately with Parsec Systems."

Jim Winters from Floorworks Inc

"Parsec Systems has been an invaluable partner of ours for the last 20 years. They have always provided top notch service and made us feel like a priority each and every time we connect. They are responsive, on top of the current industry trends and keeps our IT systems up and running. They allow us to focus on our business operations while they make sure our IT systems are up to date, efficient and at the proper capacity necessary to support the needs of the company and its users."

Paul Tryder, President of Cornerstone Corporation

Quick to respond "Tom and his firm Parsec Systems have provided an invaluable service for our company. We have used his services for a little over a year and could not be happier. He is quick to respond, identifies the problem, offers solutions and gets the issue resolved. For our company, he upgraded our anti-virus software, replaced our outdated switch and upgraded our surveillance system. If your company is looking for a new IT guy, Tom and Parsec Systems should be your first call. "

Mark Duffy
Judy's Village Flowers

I hope you have found this guide helpful in shedding some light on what to look for when hiring a professional firm to outsource your IT support to. As I stated in the opening of this report, my purpose in providing this information is to help you make an informed decision and avoid getting burned by incompetent or unethical firms luring you in with cheap prices.

A Final Word and Free Offer to Engage with Us

The next step is simple: call my office at 617-682-8486 and reference this letter to schedule a brief 10- to 15-minute initial consultation.

On this call we can discuss your unique situation and any concerns you have and, of course, answer any questions you have about us. If you feel comfortable moving ahead, we'll schedule a convenient time to conduct our 9-Point IT Systems Assessment.

Fresh eyes see things that others cannot – so, at a minimum, our free Assessment is a completely cost- and risk-free way to get a credible third-party validation of the security, stability, and efficiency of your IT systems.

To Schedule Your Initial Phone Consultation:

www.parsecsystems.co/assessment

Call: 617-682-8486

With appreciation,
